Introduction to Audio Note (UK) Ltd

We are manufacturers of the finest domestic audio reproduction equipment money can buy, using the best available technology and the finest components.

We are the largest European manufacturer of ultra-performance valve-based audio equipment, with a worldwide distribution network.

We maintain a world-class standard of quality by keeping as many manufacturing processes in house, including winding our own transformers and foil capacitors.

Audio Note (UK) released its first integrated amplifier, the OTO PP, in 1991 and it is a testimony both to the amplifier's design and also to the company's longevity that it is still possible to buy the same model today, still built completely in their factory in Sussex, England, more than 33 years later.

While other manufacturers come and go, as do their products, Audio Note (UK) has stood the test of time and is now Europe's largest and most prestigious manufacturer of ultra performance valve-based home audio systems.

The company is one of the few to offer complete in-house designed and manufactured systems. From the tip of the cartridge on the turntable, through the cables and amplification, right through to the drive units in the loudspeakers, everything is designed and produced by Audio Note (UK) in their factories in the UK and Europe.

A vast range of different options is available to suit every music lover's requirements; there are over 150 separate and distinct products currently in the Audio Note (UK) catalogue. From cost effective solutions to full systems that truly redefine the limits of performance and ones expectations of sound quality.

As the company's motto says;

"Music's Finest Conductor"
